

Wynton Marsalis, Managing and Artistic Director, Jazz at Lincoln Center

The Sheik of Araby

Ted Snyder, Harry B. Smith and Francis Wheeler

As performed by Duke Ellington and his Famous Orchestra
Transcribed and Edited by Christopher Crenshaw for Jazz at Lincoln Center

Full Score

This transcription was made especially for Jazz at Lincoln Center's 2017-18
Twenty-Third Annual *Essentially Ellington* High School Jazz Band Program.

Jazz at Lincoln Center and Alfred Publishing gratefully acknowledge the cooperation
and support provided in the publication of this year's *Essentially Ellington* music series:

Founding leadership support for *Essentially Ellington* is provided by The Jack and Susan Rudin Educational and Scholarship Fund.

Major support is provided by Jessica and Natan Bibliowicz, Alfred and Gail Engelberg, Casey Lipscomb,
Dr. J. Douglas White and the King-White Family Foundation, Cheryl and Louis Raspino, Augustine Foundation,
Ella Fitzgerald Charitable Foundation, Charles Evans Hughes Memorial Foundation and United Airlines.

NOTES ON PLAYING ELLINGTON

At least 95% of modern-day large ensemble jazz playing comes out of three traditions: Count Basie's band, Duke Ellington's band, and the orchestrations of small groups. Those young players interested in jazz will be drawn to small groups for the opportunity to improvise and for practical reasons (it is much easier to organize 4 or 5 people than it is 15). Schools have taken over the task (formerly performed by dance bands) of training musicians to be ensemble players. Due to the Basie Band's popularity and its simplicity of style and emphasis on blues and swing, the better educators have almost exclusively adopted this tradition for teaching jazz ensemble playing. As wonderful as Count Basie's style is, it doesn't address many of the important styles developed under the great musical umbrella we call jazz. Duke Ellington's comprehensive and eclectic approach to music offers an alternative.

The stylistic richness of Ellington's music presents a great challenge to educators and performers alike. In Basie's music, the conventions are very nearly consistent. In Ellington's music there are many more exceptions to the rules. This calls for greater knowledge of the language of jazz. Clark Terry, who left Count Basie's band to join Duke Ellington, said, "Count Basie was college, but Duke Ellington was graduate school." Knowledge of Ellington's music prepares you to play any big band music.

The following is a list of performance conventions for the great majority of Ellington's music. Any deviations or additions will be spelled out in the individual performance notes which follow.

1. Listen carefully many times to the Ellington recording of these pieces. There are many subtleties that will elude even the most sophisticated listener at first. Although it was never Ellington's wish to have his recordings imitated, knowledge of these definitive versions will lead musicians to make more educated choices when creating new performances. Ellington's music, though written for specific individuals, is designed to inspire all musicians to express themselves. In addition, you will hear slight note differences in the recording and the transcriptions. This is intentional, as there are mistakes and alterations from the original intent of the music in the recording. You should have your players play what's in the score.
2. General use of swing phrasing. The triplet feel prevails except for ballads or where notations such as even eighths or Latin appear. In these cases, eighth notes are given equal value.
3. There is a chain of command in ensemble playing. The lead players in each section determine the phrasing and volume for their own section, and their section-mates must conform to the lead. When the saxes and / or trombones play with the trumpets, the lead trumpet is the boss. The lead alto and trombone must listen to the first trumpet and follow him. In turn, the other saxes and trombones must follow their lead players. When the clarinet leads the brass section, the brass should not overblow him. That means that the first trumpet is actually playing "second." If this is done effectively, there will be very little balancing work left for the conductor.

4. In Ellington's music, each player should express the individuality of his own line. He must find a musical balance of supporting and following the section leader and bringing out the character of the underpart. Each player should be encouraged to express his or her personality through the music. In this music, the underparts are played at the same volume and with the same conviction as the lead.
5. Blues inflection should permeate all parts at all times, not just when these opportunities occur in the lead.
6. Vibrato is used quite a bit to warm up the sound. Saxes (who most frequently represent the sensual side of things) usually employ vibrato on harmonized passages and no vibrato on unisons. The vibrato can be either heavy or light depending on the context. Occasionally saxes use a light vibrato on unisons. Trumpets (who very often are used for heat and power) use a little vibrato on harmonized passages and no vibrato on unisons. Trombones (who are usually noble) do not use slide vibrato. A little lip vibrato is good on harmonized passages at times. Try to match the speed of vibrato. In general unisons are played with no vibrato.
7. Crescendo as you ascend and diminuendo as you descend. The upper notes of phrases receive a natural accent and the lower notes are ghosted. Alto and tenor saxophones need to use sub-tone in the lower part of their range in order to blend properly with the rest of the section. This music was originally written with no dynamics. It pretty much follows the natural tendencies of the instruments; play loud in the loud part of the instrument and soft in the soft part of the instrument. For instance, a high C for a trumpet will be loud and a low C will be soft.
8. Quarter notes are generally played short unless otherwise notated. Long marks above or below a pitch indicate full value: not just long, but full value. Eighth notes are played full value except when followed by a rest or otherwise notated. All notes longer than a quarter note are played full value, which means if it is followed by a rest, release the note where the rest appears. For example, a half note occurring on beat one of a measure would be released on beat three.
9. Unless they are part of a legato background figure, long notes should be played somewhat *fp* (forte-piano); accent then diminish the volume. This is important so that the moving parts can be heard over the sustained notes. Don't just hold out the long notes, but give them life and personality: that is, vibrato, inflection, crescendo, or diminuendo. There is a great deal of inflection in this music, and much of this is highly interpretive. Straight or curved lines imply non-pitched glisses, and wavy lines mean scalar (chromatic or diatonic) glisses. In general, all rhythmic figures need to be accented. Accents give the music life and swing. This is very important.
10. Ellington's music is about individuality: one person per part—do not double up because you have extra players or need more strength.

More than one on a part makes it sound more like a concert band and less like a jazz band.

11. This is acoustic music. Keep amplification to an absolute minimum; in the best halls, almost no amplification should be necessary. Everyone needs to develop a big sound. It is the conductor's job to balance the band. When a guitar is used, it should be a hollow-body, unamplified rhythm guitar. Simple three-note voicings should be used throughout. An acoustic string bass is a must. In mediocre or poorly designed halls, the bass and piano may need a bit of a boost. I recommend miking them and putting them through the house sound system. This should provide a much better tone than an amplifier. Keep in mind that the rhythm section's primary function is to accompany. The bass should not be as loud as a trumpet. That is unnatural and leads to over-amplification, bad tone, and limited dynamics. Stay away from monitors. They provide a false sense of balance.
12. We have included chord changes on all rhythm section parts so that students can better understand the overall form of each composition. It is incumbent upon the director to make clear what is a composed part versus a part to be improvised. The recordings should make this clear but in instances where it is not; use your best judgment and play something that sounds good, is swinging, and is stylistically appropriate to the piece. Sometimes, a student may not have the technical skill to perform a difficult transcription, especially in the case of one of Duke's solos, in that case, it is best to have the student work something out that is appropriate. Written passages should be studied and earned when possible, as they are an important part of our jazz heritage and help the player understand the function of his particular solo or accompaniment. All soloists should learn the chord changes. Solos should be looked at as an opportunity to further develop the interesting thematic material that Ellington has provided.
13. The notation of plungers for the brass means a rubber toilet plunger bought in a hardware store. Kirkhill is a very good brand (especially if you can find one of their old hard rubber ones, like the one I loaned Wynton and he lost). Trumpets use 5" diameter and trombones use 6" diameter. Where Plunger/Mute is notated, insert a pixie mute in the bell and use the plunger over the mute. Pixies are available from Humes & Berg in Chicago. Tricky Sam Nanton and his successors in the Ellington plunger trombone chair did not use pixies. Rather, each of them employed a Nonpareil (that's the brand name) trumpet straight mute. Nonpareil has gone out of business, but the Tom Crown Nonpareil trumpet straight mute is very close to the same thing. These mute/plunger combinations create a wonderful sound (very close to the human voice), but they also can create some intonation problems which must be corrected by the lip or by using alternate slide positions. It would be easier to move the tuning slide, but part of the sound is in the struggle to correct the pitch. If this proves too much, stick with the pixie—it's pretty close.

14. The drummer is the de facto leader of the band. He establishes the beat and controls the volume of the ensemble. For big band playing, the drummer needs to use a larger bass drum than he would for small group drumming. A 22" or 24" is preferred. The bass drum is played softly (nearly inaudible) on each beat. This is called feathering the bass drum. It provides a very important bottom to the band. The bass drum sound is not a boom and not a thud—it's in between. The larger size drum is necessary for the kicks; a smaller drum just won't be heard. The key to this style is to just keep time. A rim knock on two and four (chopping wood) is used to lock in the swing. When it comes to playing fills, the fewer, the better.
15. The horn players should stand for their solos and solis. Brass players should come down front for moderate to long solos, surrounding rests permitting. The same applies to the pep section (two trumpets and one trombone in plunger/mutes).
16. Horns should pay close attention to attacks and releases. Everyone should hit together and release together.
17. Above all, everyone's focus should remain at all times on the swing. As the great bassist Chuck Israels says, "The three most important things in jazz are rhythm, rhythm, and rhythm, in that order." Or as Bubber Miley (Ellington's first star trumpeter) said, "It don't mean a thing if it ain't got that swing."

GLOSSARY

The following are terms which describe conventions of jazz performance, from traditional New Orleans to the present avant garde.

Break • within the context of an ongoing time feel, the rhythm section stops for one, two, or four bars. Very often a soloist will improvise during a break.

Call and response • repetitive pattern of contrasting exchanges (derived from the church procedure of the minister making a statement and the congregation answering with "amen"). Call-and-response patterns usually pit one group of instruments against another. Sometimes we call this "trading fours," "trading twos," etc., especially when it involves improvisation. The numbers denote the amount of measures each soloist or group plays. Another term frequently used is "swapping fours."

Coda • also known as the "outro." "Tags" or "tag endings" are outgrowths of vaudeville bows that are frequently used as codas. They most often use deceptive cadences that finally resolve to the tonic or they go from the sub-dominant and cycle back to the tonic.

Comp • improvise accompaniment (for piano or guitar).

Groove • the composite rhythm. This generally refers to the combined repetitive rhythmic patterns of the drums, bass, piano, and guitar, but may also include repetitive patterns in the horns. Some grooves are standard (i.e., swing, bossa nova, samba), while others are manufactured (original combinations of rhythms).

Head • melody chorus.

Interlude • a different form (of relatively short length) sandwiched between two chorus forms. Interludes that set up a key change are simply called modulations.

Intro • short for introduction.

Ride pattern • the most common repetitive figure played by the drummer's right hand on the ride cymbal or hi-hat.

Riff • a repeated melodic figure. Very often, riffs repeat verbatim or with slight alterations while the harmonies change underneath them.

Shout chorus • also known as the "out chorus," the "sock chorus," or sometimes shortened to just "the shout." It is the final ensemble passage of most big band charts and where the climax most often happens.

Soli • a harmonized passage for two or more instruments playing the same rhythm. It is customary for horn players to stand up or even move in front of the band when playing these passages. This is done so that the audience can hear them better and to provide the audience with some visual interest. A soli sound particular to Ellington's music combines two trumpets and trombone in plungers/mutes in triadic harmony. This is called the "pep section."

Stop time • a regular pattern of short breaks (usually filled in by a soloist).

Swing • the perfect confluence of rhythmic tension and relaxation in music creating a feeling euphoria and characterized by accented weak beats (a democratization of the beat) and eighth notes that are played as the first and third eighth notes of an eighth-note triplet. Duke Ellington's definition of swing: when the music feels like it is getting faster, but it isn't.

Vamp • a repeated two- or four-bar chord progression. Very often, there may be a riff or riffs played on the vamp.

Voicing • the specific spacing, inversion, and choice of notes that make up a chord. For instance, two voicings for G7 could be:

Note that the first voicing includes a 9th and the second voicing includes a 9th and a 13th. The addition of 9ths, 11ths, 13ths, and alterations are up to the discretion of the pianist and soloist.

THE FOUR ELEMENTS OF MUSIC

The following are placed in their order of importance in jazz. We should never lose perspective on this order of priority.

Rhythm • meter, tempo, groove, and form, including both melodic rhythm and harmonic rhythm (the speed and regularity of the chord changes).

Melody • a tune or series of pitches.

Harmony • chords and voicings.

Orchestration • instrumentation and tone colors.

—David Berger

THE SHEIK OF ARABY • INSTRUMENTATION

ORIGINAL RECORDING INFORMATION

Composer • Ted Snyder, Harry B. Smith, and Francis Wheeler

Arranger • Duke Ellington

Recorded • May 16, 1932 in New York

Master # • B11840-A

Original Issue • Brunswick 6336

Currently available on CD • *The Complete 1932–1940 Brunswick, Columbia, and Master Recordings of Duke Ellington and His Famous Orchestra* (Mosaic 248)

Currently available as digital download • *The Duke Ellington Anthology, Vol. 9 (1931–1932)*

Personnel • Arthur Whetsel, Cootie Williams, Freddy Jenkins (trumpet); Joe Nanton, Lawrence Brown (trombone); Juan Tizol (valve trombone); Barney Bigard, Johnny Hodges (soprano sax)*; Otto Hardwick, Harry Carney (alto sax); Barney Bigard (tenor sax); Fred Guy (banjo); Duke Ellington (piano); Wellman Braud (bass); Sonny Greer (drums)

Soloists • Lawrence Brown (trombone), Johnny Hodges (soprano sax)

*Both players listed on personnel record for recording session.

REHEARSAL NOTES

- Written in 1921, this pop tune had just the kind of melody and harmonies that jazz musicians loved to play and within just a few years it was in the libraries of almost every jazz and dance band around the world. New Orleans clarinetist/saxophonist Sidney Bechet loved it so much he evolved a solo on **The Sheik of Araby** that turned into a composed set of variations that he played every time the tune was called. It wasn't unusual in those days for soloists to have "set" solos on favorite songs, and amazingly, Bechet's famous choruses wound up being a feature of Duke Ellington's first recording of **The Sheik of Araby** in 1932.
- It's still a little known fact that Bechet played with the early Ellington band in 1925 at The Kentucky Club. Young Johnny Hodges (who didn't join Ellington until 1928) was travelling from his native Boston during the same period to learn from and eventually form a two-soprano sax act with Bechet. So somewhere between these two events Bechet's choruses entered the Ellington repertoire and when they finally got around to recording **The Sheik of Araby**, Hodges played it note for note. By 1940, he had the entire sax section playing it unison, which you can hear on a live dance date in Fargo, North Dakota. Check it out on YouTube here: <https://www.youtube.com/watch?v=rKKH8q6qezE>
- This is a loose, jam-type of arrangement, with room for solos. Remember that even though it sounds more old-fashioned than later Ellington recordings, it should be played with the same swing as you approach any of his other pieces. Don't hamstring yourselves by trying to turn it into a "period piece".
- It's vital that all of the soloists you showcase know the changes and can improvise on them. Have everyone sing the melody so they know it inside and out if they can, to arpeggiate the triads as well. Even if that's a stretch, it's worth trying. Maybe a recording of a piano doing it will help.
- Trombonist Lawrence Brown's melody solo is transcribed at **A**; he had already made a handful of classic recordings with Louis Armstrong, and his phrasing is right out of Satchmo's bag. It's worth the effort to have your player learn the solo note for note and then try and incorporate it into something of their own—or play it verbatim!
- It was Tricky Sam Nanton who played the growl trombone solo at **E**, and it makes for a great contrast with the smooth, open-toned Brown solo. If you choose to insert solos in these sections, have them contrast in the same way—always shoot for variety.

- The backgrounds can sound "old" if you make them sound that way, but they can also be played in a style that is more Swing-Era oriented, like the Basie band of the 30's and 40's. This is all your call, of course, but you should know that you have options.
- A solo soprano or the whole sax section can play the Bechet solo at **I** (like Duke did on the 1940 version) or you can be creative and have more folks join in. Make sure that the brass backgrounds are precise and interlock as written, to propel the solo.
- The return of the intro at **M** should sound like a sudden thing—a new chapter—and lead into the shout chorus at **N**, which builds slowly. Listen to the original recording to see how they do, and how the rhythm section plays a large role in the gradual build through to the ending.

—Loren Schoenberg

CONDUCTOR

Jazz at Lincoln Center Library - Essentially Ellington

THE SHEIK OF ARABY

Ted Snyder, Harry B. Smith and Francis Wheeler
Arranged by Duke Ellington
Transcribed by Christopher Crenshaw

Tight 4 $\text{♩} = 180$

A 2-Groove

The musical score is arranged in a standard orchestral layout. It includes staves for Reed 1 (Alto and Soprano Sax), Reed 2 (Alto and Tenor Sax), Trumpets 1-3, Trombones 1-3, Banjo, Piano, Bass (slap bass), and Drums (crash and sock cymbal). The score is in 4/4 time with a tempo of 180. The key signature has one flat (Bb). The score is divided into two main sections: a first section with dynamics *f* and *p*, and a second section marked 'A 2-Groove' with dynamics *mf* and *p*. The second section includes a 'solo (suggest melody)' for the Trombone 1 part, with harmonic changes to Bb6, B=, and F7. The Banjo part features a rhythmic pattern with chords Eb9, Bb, B=7, and F7. The Drums part features a consistent rhythmic pattern with accents on the snare.

The Sheik of Araby

B

This musical score is for the piece "The Sheik of Araby" and is marked with a section symbol "B". The score is arranged for a vocal ensemble and a full band. The vocal parts include Alto, Soprano, Alto, and Tenor. The instrumental parts include three Trumpets (Tpts. 1, 2, 3), three Trombones (Tbns. 1, 2, 3), a Bjoja (Bjo.), Piano (Pno.), Bass (Bs.), and Drums (Drs.).

The key signature is one flat (B-flat major or D minor). The tempo and style are not explicitly indicated but appear to be a standard march or dance rhythm.

The score is divided into measures. The vocal parts feature long notes and rests, with some melodic lines in the Soprano and Tenor parts. The instrumental parts include rhythmic patterns, such as the Bjoja's steady eighth-note accompaniment and the Trombone 1 part's melodic line. Chord symbols are provided for the Trombone 1 part: F7, Bb6, Bb, Db7, and F7.

The Sheik of Araby

C

This musical score is for the piece "The Sheik of Araby" and is marked with a "C" time signature. It features a vocal ensemble consisting of Alto, Soprano, Alto, and Tenor, along with instrumental parts for Trumpets (1, 2, 3), Trombones (1, 2, 3), Bjo (Bassoon), Piano (Pno.), Bass (Bs.), and Drums (Drs.).

The vocal parts (Alto, Sop., Alto, Tenor) are written in treble clef with a key signature of one sharp (F#). The instrumental parts for Trumpets, Trombones, and Bass are in bass clef with a key signature of two flats (Bb). The Bjo part is in treble clef with a key signature of two flats (Bb). The Piano and Drums parts are in bass clef with a key signature of two flats (Bb).

The score is divided into measures, with a double bar line indicating a section change. The instrumental parts include various musical notations such as slurs, accents, and triplets. The Bjo part includes chord markings: F7, Bb6, F7+5, Bb, Bb7, and F7. The Trombone 1 part includes slurs and accents over triplet figures.
